

YOGANATHAN M

Software Developer

9626210602 | yoganathanm11@gmail.com | linkedin.com/in/yoganathan-m-b99480393 | Chennai, India

PROFESSIONAL SUMMARY

Software Developer with 1.5 years of experience specializing in Go (Golang) backend development, RESTful APIs, PostgreSQL, MySQL, SQL optimization, and third-party API integrations. Experienced in building and maintaining production backend services for fintech applications, with a focus on performance, reliability, and efficient data processing. Hands-on experience in structured error handling, retry mechanisms, API logging and monitoring, database optimization, and production troubleshooting. Proficient in Go, REST APIs, PostgreSQL, MySQL, Vue.js 2, Git, Docker, Kubernetes and Linux.

TECHNICAL SKILLS

Backend: Go (Golang), REST APIs, WebSocket, API Integration, Error Handling, Input Validation, Retry Mechanisms

Databases: PostgreSQL, MySQL, SQL, SQL Query Optimization

Frontend: Vue.js 2, JavaScript (ES6+), HTML5, CSS3

Tools & Platforms: Git, GitHub, Linux, Postman, VS Code, Docker, Kubernetes

Go Concepts: Goroutines, Channels, Mutex, WaitGroup

WORK EXPERIENCE

Software Developer · **Flattrade Broking Pvt. Ltd — Chennai**

Apr 2025 – Present

- Develop and maintain Go-based REST APIs for internal dashboards and third-party service integrations in production.
- Implement structured error handling, input validation, and configurable retry mechanisms to improve reliability of API workflows.
- Implement WebSocket-based real-time data sharing between backend services and Vue.js dashboards, reducing reliance on repeated API polling.
- Design PostgreSQL schemas and optimize SQL queries for production data retrieval and reporting.
- Diagnose API downtime and performance bottlenecks and collaborate with the operations team on production incident resolution.

PROJECTS

1. EXTERNAL API RESPONSE TRACKER

Go (Golang) | RESTful APIs | PostgreSQL | Vue.js 2

- Developed a Go (Golang) API monitoring system to track third-party API availability, success/failure rates, and latency.
- Built REST API logging services in Go to capture request/response details, HTTP status codes, latency, and errors in PostgreSQL.
- Implemented retry mechanisms and structured error handling for third-party API failures to improve service reliability.

- Developed a Vue.js 2 dashboard for API health monitoring, filtering, status tracking, failure analysis, and latency trends.

2. CLIENT FUND MOVING TRACKER

Go (Golang) | RESTful APIs | PostgreSQL | Vue.js 2

- Developed Go backend services and APIs to track client fund allocation and deallocation transactions across integrated systems.
- Implemented real-time fund movement monitoring and validation to improve transaction accuracy and traceability.
- Developed automated validation logic to detect fund mismatches, such as deallocation without corresponding allocation to the target client.
- Implemented automated email alerts for critical transaction mismatches, enabling faster issue identification and manual intervention.

EDUCATION

B. E. — Electronics & Communication Engineering

M. Kumarasamy College of Engineering, Karur

2019 – 2023

CERTIFICATION

Python Full Stack Development — QSpider Institute

LANGUAGES

Tamil, English
